Lecture 1

Motivation (ML practical examples), Syllabus, Prerequisites and Resources

1.1 Tentative syllabus

Here are is a tentative syllabus:

- Motivation: What is Machine Learning (ML) and why we need to study ML?
- Data: Representation/Featurization, Normalization (after some idea in classification/regression), Data partition (train, val and test)
- Regression: Linear, Ridge, LASSO
- Classification: kNN, Bayes classifier, Linear discriminant analysis, Logistic regression, SVM, Decision tree, Random forest, Boosting, Ensemble methods
- Clustering: K-means, Hierarchical and agglomerative clustering/linkage clustering, Spectral graph clustering
- Dimensionality reduction and data visualization: PCA, Multidimensional scaling, Random projection, Issomap, t-SNE, UMAP etc.
- Kernel methods: Definition, Reproducing Kernel Hilbert space, kernel-SVM, kernel-PCA, kernel-Least square regression

4LECTURE 1. MOTIVATION (ML PRACTICAL EXAMPLES), SYLLABUS, PREREQUISITES

- Low rank matrix completion and compressive sensing
- ML and Society: Fairness, Explainability and Environment effect
- Learning theory: Approximation and estimation error, Empirical risk minimisation, Convergence and consistency, Capacity measure of function classes, Shattering coefficient, VC dimension, Rademacher complexity, Occam's razor

1.2 Prerequisites

- Mathematics: No worries, we will touch some background when we need
 - Linear Algebra: Vector space, Basis, Dimension, Matrix algebra (Addition, Multiplication, Trace, Inverse etc.), Eigen value and Eigen vectors, Positive definite matrices, Singular value decomposition etc.
 - Multivariate Calculus: Derivative, Partial derivative, Taylor series expansion, Chain rules etc.
 - Basic Optimisation: Convex set, Convex hull, Convex function, Gradient of a function, Hessian, Constrained and Unconstrained optimisation problem, Optimality condition
 - Probability: Definition, Random variables, Distribution function and their different variants, Conditional probability, Independence, Expectation, Variance, Moments, Entropy, Law of large numbers, Central limit theorem
- Computer programming: Any one from C/C++/Python (recommended for the class project and assignments)/MATLAB/Octave
- Basic concept in Algorithms and Data Structure

1.3 ML and related books

We will follow multiple books for different topics. Here are some suggested books will follow in our course :

- [1] Kevin Patrick Murphy, Machine Learning: a Probabilistic Perspective, MIT Press, 2012 [online]
- [2] Kevin Patrick Murphy, Probabilistic Machine Learning: An Introduction, MIT Press, 2022 [online]
- [3] Christopher M. Bishop, Pattern Recognition and Machine Learning, Springer, 2006 [online]
- [4] Mehryar Mohri, Afshin Rostamizadeh, and Ameet Talwalkar, Foundations of Machine Learning, MIT Press, Second Edition, 2018 [online]
- [5] Shai Shalev-Shwartz and Shai Ben-David, Understanding Machine Learning: From Theory to Algorithms, Cambridge University Press, 2014 [online]
- [6] Trevor Hastie, Robert Tibshirani and Martin Wainwright, Statistical Learning with Sparsity: The Lasso and Generalizations, CRC Press, 2015 [online]
- [7] Solon Barocas, Moritz Hardt and Arvind Narayanan, Fairness and Machine Learning: Limitations and Opportunities, fairmlbook.org, 2019 [online]
- [8] Ian Goodfellow, Yoshua Bengio, and Aaron Courville. Deep Learning. MIT Press, 1st edition, 2016. [online]
- [9] R. O. Duda, P. E. Hart and D. G. Stork, Pattern Classification and Scene Analysis, 2nd ed., Wiley, New York, 2000
- [10] S. Theodoridis and K. Koutroumbas, Pattern Recognition, Academic Press, San Diego, 1999
- [11] K. Fukunaga, Introduction to Statistical Pattern Recognition, 2nd ed., Academic Press, New York, 1990
- [12] Luc Devroye, Laszlo Györfi, and Gabor Lugosi, A Probabilistic Theory of Pattern Recognition, 1st edition, Springer, 1996

1.4 ML and related tools

Here are some popular ML tools:

- Machine Learning in Python - <https://scikit-learn.org/stable/>
- ML in GPU - <https://rapids.ai/>
- PyTorch - <https://pytorch.org/>
- ...

1.5 ML datasets repository

You can find some datasets to evaluate your ML models in UCI Machine Learning Repository (<https://archive.ics.uci.edu/ml/datasets.php>)

1.6 ML/AI top tier conference

- International Conference on Machine Learning (ICML) - <https://icml.cc/>
- Neural Information Processing Systems (NeurIPS) - <https://neurips.cc/>
- International Conference on Learning Representations (ICLR) - <https://iclr.cc/>
- Association for the Advancement of Artificial Intelligence (AAAI) - <https://www.aaai.org/>
- Computer Vision Foundation (CVF) - <https://openaccess.thecvf.com/menu>

1.7 ML top journals

- Journal of Machine Learning Research (JMLR) - <https://www.jmlr.org/>

1.8. FOR RECENT UPDATES ON ML YOU CAN FOLLOW THE ARXIV7

1.8 For recent updates on ML you can follow the arXiv

You can go to Computer Science (CS) section in arXiv and under that you can find different branches of CS (like AI, ML, etc.).

- AI - <https://arxiv.org/list/cs.AI/recent>
- ML - <https://arxiv.org/list/cs.LG/recent>

Lecture 2

Data: Representation/Featurization,
Normalization (after some idea in
classification/regression), Data
partition (train, val and test)

2.1 Suggested reading

Please go through the class slides.

2.2 Homework

- [1] Consider Minkowski distance for $p = -2, -1, 0, 1, 1.5, 2, 3, 6, \infty$. Draw all the points within the intervals has unit distance from the origin for all p 's:
 - 2D: $x \in [-1, 1]$ and $y \in [-1, 1]$
 - 3D: $x \in [-1, 1]$, $y \in [-1, 1]$ and $z \in [-1, 1]$
- [2] Create a random dataset in \mathbf{R}^{100} of size 50000 with random class labels from $\{1, 2, 3, 4\}$. Now partition the data into the following subsets:
 - Training: 50%
 - Validation: 20%

- Testing: 30%

Plot (bar) the frequency of each class label for each subset.

Lecture 3

k- nearest neighbour (kNN) classifier

3.1 Suggested reading

For algorithm, please go through the class slides and for general discussion, you can go through Duda et al.'s [3] book Chapter 4, Section 4.5: The nearest-neighbour Rule. You can see the original paper [1] title with Nearest neighbor pattern classification, an online version can be found here.

For deep theoretical development, you can look at Devroye et al.'s [2] book Chapter 5. You may find some helpful results in Chapter 19 of Shalev-Shwartz and Ben-David's [4] book as well.

3.2 Assignment

Implement kNN classifier and test on MNIST digit data with the following settings:

- You can use the supplied data in .gz form or can be downloaded from: <http://yann.lecun.com/exdb/mnist/>
- Strictly follow their data partition
- There is no validation set! Make your own validation set from the training set (20%)
- Use different similarity metrics ($p = 1, 2, \text{and } \infty$) and ($k = 1, 3, \dots, 25$) calculate the classifier errors

- Plot $(3 - D)$ the classification errors/accuracy for different p 's and k 's

Submission deadline: 19-02-2024 (11:59 PM)
